

The Earth Drive is the ultimate boost/overdrive pedal, designed to retain your instrument's natural character while providing an organic, full-bodied, yet transparent sound. Use the Earth Drive as a clean boost to add warmth and smoothing, or turn up the drive knob and get a wide spectrum of overdrive harmonics and singing sustain. The Earth Drive has a huge range of boost control with its volume knob, while the tone knob helps you perfectly dial in the treble response. Whether you play bass, pedal-steel, electric piano, electric guitar, organ, whatever, the Earth Drive is quite possibly the most useful and versatile drive pedal you've ever heard.

VOLUME:

Turn knob to control output/loudness level.

TONE:

Turn knob to control amount of brightness or treble.

ON/OFF:

Push switch to engage or bypass drive effect.

DRIVE:

Turn knob to control amount of drive effect.

INPUT JACK:

When running off the battery (*not* a DC power supply), always UNPLUG input jack when unit is not in use for extended periods of time to help conserve battery life.

SPECIFICATIONS:

Hard Mechanical Bypass Switch - non-buffered

Input impedance \approx 700k Ohms

Battery Life \approx 100 hours

DC Power - 9v alkaline battery OR standard 9v, tip-negative guitar pedal power supply
